

BRIANE ENVIRONNEMENT

Founded in 1946, *Briane Environnement* is specialized in collect, recovery, treatment and recycling of all kinds of industrial and domestic wastes.

We actually recycle **glass, iron and metals** (ferrous and non ferrous), **paper, cardboard, plastic and wood**.

Moreover, we collect and transfer hazardous and non hazardous industrial wastes.

We produce each year **100,000 tons of cullet, 10,000 tons of paper and 10,000 tons of Hazardous Industrial Waste (HIW)**.

FIGURES

-  7,2 millions US\$ turnover
-  45 employees (in Europe and Asia)
-  150,000 T of waste collected each year
-  One of the first French companies producing **cullet**

Overview of our main activities

GLASS TREATMENT AND CULLET PRODUCTION

Glass is 100% recyclable. By the way, industrial glassworkers cannot use collected glass without a special treatment to eliminate impurities.

Briane Environnement is one of the major actor in the recycling French process.

We supply several local administrative units in collecting glass. Our process allows us to treat 150,000 tons of glass a year.

These characteristics are:

-  **The electromagnetic sorting system by "eddy current"** which eliminates aluminium and lead.
-  **The artificial vision system** which guarantees an optimum sorting out with rapid and productivity separation.

As finish product, our **cullet** contains less than 0,015% total impurities.

CULLET PRODUCTION

OPTICAL SORTING

INSTALLATIONS

Briane Environnement personalized solutions

CONSULTING IN WASTE TREATMENT POLICIES

-  Creation of a waste management policy: from collect to recycling of industrial or domestic wastes
-  Help with the installation of a selective sorting policy in urban zones
-  Support in the design of waste storage diagrams
-  Support to raise public and industrials awareness of ecological issues (protection and safeguard)

CONSULTING IN THE INSTALLATION OF RECYCLING UNITS

-  Recycling Diagrams Design
-  Support in the creation of recycling units: selective sorting at the beginning, treatment, conditioning
-  Transfer of technological know-how: courses for managers and technicians in leading installations, safety, driving industrial vehicles
-  Support in the processes of ISO certification

INSTALLATION OF RECYCLING UNITS

-  Establishment of waste recycling installations
-  Transport of waste and logistic organization

RECYCLING PAPER AND CARDBOARD FOR PAPER MILLS

Collecting and preparing papers and cardboards are what we are doing on those wastes: they are conditioned with hydraulic press and sent in big bags to paper mills.

SORTING AND PREPARING METALS

Briane Environnement prepares all ferrous and non ferrous metals to international industrial standards, in using up to date and sophisticated equipment.

Based in the south of France for more than 55 years, the 20,000 m² location allows Briane Environnement to recycle different materials with an international recognized quality, and up to date equipments.

Gérard BRIANE, Chairman of Briane Environnement, recycler for 25 years can provide the indispensable solution to the professional field.

The professionalism of our staff, the automation and the computerization of the equipments permit us to comply with European specifications, and to guarantee an irreproachable and continuous quality of finish products.

Briane Environnement is ISO certified since 1997. Moreover, we are ISO 9001:2000 certified by BVQI (Bureau Veritas Quality International). Our firm is working forward to obtain the ISO14001 certification, which rewards an environmental management.
